DETAILED ACTION

Amendment

The amendment filed on 27 August 2008 has been entered into this application.

Allowable Subject Matter

Claims 1, 2, 5-14 and 17-43 are allowed.

As to claims 1 and 2, the prior art of record, taken alone or in combination, fails to disclose or render obvious a step during which one of said receiver measures the quantity of light reflected by the object when the object is illuminated by one of said emitters for at least two different emitter - receiver pairs, a step of calculating at least two characteristic values from said measured values, wherein, as emitters and receivers are disposed in the alternating and regular arrangement, a characteristic value is calculated for each emitter by averaging the values, measured by the receivers on each side of said emitter when only said emitter is turned on, and a step of determining at least one position of the object by directly reading a table indexed by said at least two characteristic values, the content of said table being predetermined and set before said measurement step, in combination with the rest of the limitations of the claim. Claims 1, 5-12, 27, 29-34, and 42 are allowable by virtue of their dependency.

As to claims 13 and 14, the prior art of record, taken alone or in combination, fails to disclose or render obvious to obtain and store for at least two different emitter - receiver pairs the quantity of light reflected by said object and measured by said receiver when the object is illuminated by said emitter, - to calculate at least two characteristic values from said measured values, wherein as emitters and receivers are disposed in the alternating and regular arrangement, a characteristic value is calculated for each emitter by averaging the values measured by the receivers on each side of said emitter when only said emitter is turned on, and to determine at least one position of the object by directly reading a table indexed by said at least two characteristic values, the content of said table being predetermined and set before said step of obtaining the quantity of light reflected by said object, in combination with the rest of the limitations of the claim. Claims 17-26, 28, 35-41 and 43 are allowable by virtue of their dependency.

The reference of Cavallucci (2004/0246105 A1) discloses the detection of the position of objects that is based on a light transmission principle, not a reflection of light as is the case for method claims 1 and 2 and device claims 13 and 14. However Cavallucci fail to disclose, teach or suggest a step during which one of said receiver measures the quantity of light reflected by the object when the object is illuminated by one of said emitters for at least two different emitter - receiver pairs, a step of calculating at least two characteristic values from said measured values, wherein, as emitters and receivers are disposed in the alternating and regular arrangement, a

Art Unit: 2886

characteristic value is calculated for each emitter by averaging the values, measured by the receivers on each side of said emitter when only said emitter is turned on, and a step of determining at least one position of the object by directly reading a table indexed by said at least two characteristic values, the content of said table being predetermined and set before said measurement step.
